

AMENDMENTS TO THE CLAIMS

Claims 1-31 are pending in the instant application. Claims 1-2, 4, 7, 9, 11-12, 14, and 21-30 have been amended. Claims 1, 11, and 21 are independent claims. Claims 2-10, 12-20, and 22-31 depend from independent claims 1, 11, and 21, respectively.

The Applicant requests reconsideration of the claims in view of the following amendments reflected in the listing of claims.

Listing of claims:

1. (Currently amended) A method for producing and delivering media content, the method comprising:
establishing a personal television channel at a first geographic location;
modifying media content to produce a media program; [[and]]
editing, at said first geographic location, metadata associated with said media content; and
associating said produced media program and said edited metadata with said established personal television channel.
2. (Currently amended) The method according to claim 1, comprising acquiring prior to said editing, said metadata associated with said media content.
3. (Previously presented) The method according to claim 2, wherein said acquired metadata is one or both of program metadata and/or primitive metadata.

4. (Currently amended) The method according to claim ~~[[2]]~~1, comprising ~~editing said acquired metadata associated with said media content~~delivering said produced media program along with said edited metadata from said first geographic location to a second geographic location, for displaying at said second geographic location.

5. (Previously presented) The method according to claim 2, comprising updating said acquired metadata associated with media content to reflect at least a portion of changes associated with said modifying.

6. (Previously presented) The method according to claim 5, comprising displaying at least a portion of said produced media program.

7. (Currently amended) The method according to claim 1, wherein said modifying ~~further~~ comprises augmenting and editing said media content.

8. (Previously presented) The method according to claim 1, comprising determining whether a media program comprises said modified media content.

9. (Currently amended) The method according to claim 8, comprising, if said media program comprises said modified media content, processing said media program based on metadata associated with said modified media content.

10. (Previously presented) The method according to claim 1, comprising synchronizing said modified media content for presentation in said personal television channel.

11. (Currently amended) A machine-readable storage having stored thereon, a computer program having at least one code section for producing and

delivering media content, the at least one code section being executable by a machine for causing the machine to perform steps comprising:

establishing a personal television channel at a first geographic location;
modifying media content to produce a media program; [[and]]
editing, at said first geographic location, metadata associated with said media content; and
associating said produced media program and said edited metadata with said established personal television channel.

12. (Currently amended) The machine-readable storage according to claim 11, comprising code for acquiring prior to said editing, said metadata associated with said media content.

13. (Previously presented) The machine-readable storage according to claim 12, wherein said acquired metadata is one or both of program metadata and/or primitive metadata.

14. (Currently amended) The machine-readable storage according to claim [[12]]11, comprising code for ~~editing said acquired metadata associated with said media content~~ delivering said produced media program along with said edited metadata from said first geographic location to a second geographic location, for displaying at said second geographic location.

15. (Previously presented) The machine-readable storage according to claim 12, comprising code for updating said acquired metadata associated with media content to reflect at least a portion of changes associated with said modifying.

16. (Previously presented) The machine-readable storage according to claim 15, comprising code that causes display of at least a portion of said produced media program.

17. (Previously presented) The machine-readable storage according to claim 11, comprising code for augmenting and editing said media content.

18. (Previously presented) The machine-readable storage according to claim 11, comprising code for determining whether a media program comprises said modified media content.

19. (Previously presented) The machine-readable storage according to claim 18, comprising code for processing said media program based on metadata associated with said modified media content, if said media program comprises said modified media content.

20. (Previously presented) The machine-readable storage according to claim 11, comprising code for synchronizing said modified media content for presentation in said personal television channel.

21. (Currently amended) A system for producing and delivering media content, the system comprising:

at least one processor for establishing a personal television channel at a first geographic location;

said at least one processor modifies media content to produce a media program;
[[and]]

said at least one processor enables editing, at said first geographic location, of metadata associated with said media content; and

said at least one processor enables associate[[es]]ing of said produced media program and said edited metadata with said established personal television channel.

22. (Currently amended) The system according to claim 21, wherein said at least one processor enables ~~acquir[es]]ing prior to said editing, of said~~ metadata associated with said media content.

23. (Currently amended) The system according to claim 22, wherein said acquired metadata is ~~at least one~~ one or both of program metadata and/or primitive metadata.

24. (Currently amended) The system according to claim ~~[[22]]~~21, wherein said at least one processor enables ~~control[[s]]ling of editing said acquired metadata associated with said media content~~ delivering of said produced media program along with said edited metadata from said first geographic location to a second geographic location, for displaying at said second geographic location.

25. (Currently amended) The system according to claim 22, wherein said at least one processor enables ~~update[[es]]ing of~~ said acquired metadata associated with media content to reflect at least a portion of changes associated with said modifying.

26. (Currently amended) The system according to claim 25, wherein said at least one processor ~~causes~~ enables ~~displaying~~ of at least a portion of said produced media program.

27. (Currently amended) The system according to claim 21, wherein said at least one processor enables ~~augment[[s]]ing and edit[[s]]ing of~~ said media content.

28. (Currently amended) The system according to claim 21, wherein said at least one processor enables ~~determine[[es]]ing of~~ whether a media program comprises said modified media content.

29. (Currently amended) The system according to claim 28, wherein said at least one processor enables process[es]ing of said media program based on metadata associated with said modified media content, if said media program comprises said modified media content.

30. (Currently amended) The system according to claim 21, wherein said at least one processor enables synchroniz[es]ing of said modified media content for presentation in said personal television channel.

31. (Previously presented) The system according to claim 21, wherein said at least one processor is one or more of a computer processor, a media exchange software processor, a media peripheral processor, a storage processor and/or a media exchange server processor.
